

# PopLock Interlocking Equestrian Flooring Tiles

PopLock Interlocking Equestrian flooring tiles are the first of a *new generation of recycled rubber flooring products*, produced by MMI in Southern California. This 24" x 24" x 1" interlocking rubber equestrian flooring tile introduces a brand new type of interlocking edge technology, which is *certain to be a game changer* for the recycled rubber flooring industry.

The PopLock Interlocking Edge technology attaches these tiles, edge to edge, without the use of adhesives or mechanical fasteners.

This patent pending interlocking edge design works in a way that is reminiscent of that used in some common resealable plastic bags. On each edge of the PopLock tiles, there is an oval-shaped male ridge or a similarly shaped female groove. When these components are pressed together, a strong, shift resistant edge connection is created. These tiles can be joined together or separated in seconds, over and over again.

PopLock Equestrian Flooring Tiles can be used for many indoor or outdoor applications. This product is a slightly heavier and more dense version of the popular PopLock Sport / Fitness Tiles. With a density of 63 pounds per cubic foot, this material can easily support the weight of most large animals as well as light vehicle traffic. The 1" thickness provides the maximum amount of impact absorption along with superior thermal and acoustic insulation.

The ease with which these tiles can be assembled and disassembled makes this product ideal for those applications which require frequent reconfiguration. Some examples include covering the floors of multi-purpose event facilities or creating a temporary stall for a visiting animal.

PopLock Sport /Fitness Flooring Tiles are available in three color series options. For utility applications, the budget-priced solid black tiles are a great choice. For those who want to add some color, this product is offered in five pigmented, (color coated), versions, brown, gray, green, tan and terra cotta red. A large selection of standard and custom premium EPDM color mixes are also available in color densities ranging from 10% to 90%.

## Specifications

Installed Size	24" x 24" x 1", (25" x 25" including the overlapping interlocking edges)
Weight	21 pounds per tile, 5 pounds per square foot
Density	63 pounds per cubic foot
Durometer	50 to 60 +-
Pigmented Colors	Black, Terra Cotta Red, Gray, Brown Blue, Green
Speckled EPDM Colors	20% White, 20% Tan, 20% Red (Custom Premium EPDM color mixtures in densities of 10% to 90%)

Produced in California, USA, from recycled tire rubber. Covered by a five-year limited warranty.
