

EM502 THE ORIGINAL STALL MAT

Made in America's Heartland for over 50 Years, **The Original Stall Mat** is built to last in the harshest environments. Constructed of re-vulcanized recycled tire rubber, **The Original Stall Mat** is stronger and safer than other urethane bound stall mats and offers a traction enhancing pebble top surface with grooved evacuation channels along the bottom to minimize the containment of moisture and improve air flow.

The re-vulcanization process uses a high heat and pressure mold and chemical rebonding to create a non-permeable surface that is easily cleaned, maintained and disinfected that also has a tensile strength 4 times stronger than urethane bound mats. This process results in a mat that can protect both your facility and users in the most dynamic conditions and puts it in high demand across both the equine and recreation markets.

Each mat is $\frac{3}{4}$ " thick and trimmed to four trued edges that measures 71"x47" and allows for easy, no gap, wall to wall installation. Each mat weighs about 94lbs and has a random speckle pattern that helps hide dust and footprints. These mats are produced using our own internally recycled rubber allowing us to create a 100% zero waste material process.
